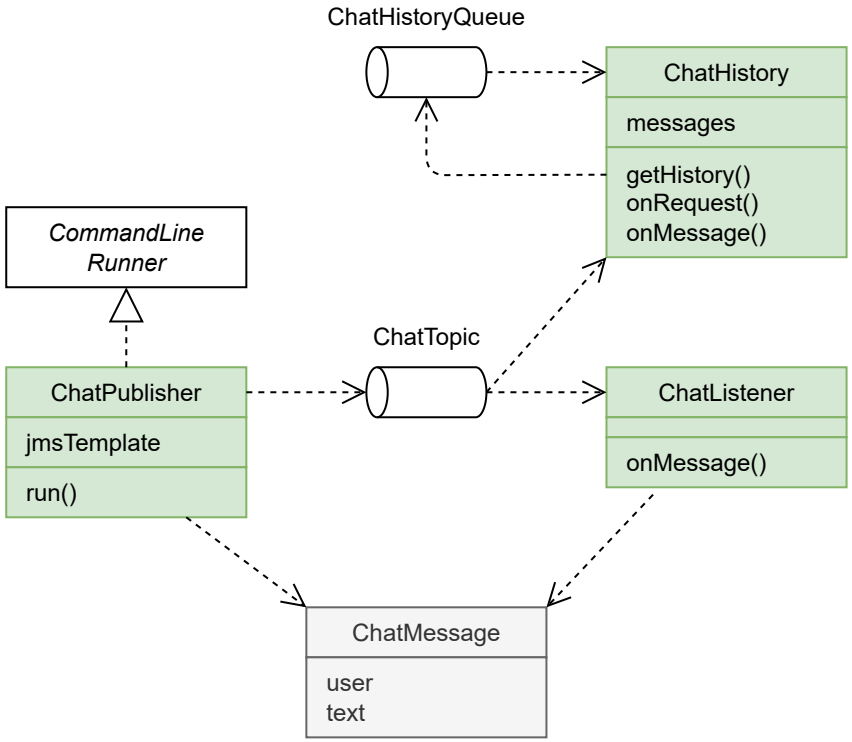
Spring Core

Exercise: Chat Application (Message History)



1. Implement a component `ChatHistory` that also listens on the `ChatTopic` and keeps a history of the exchanged messages.

2. Implement the method `getHistory` that sends an empty message to the topic `ChatHistoryTopic` using a temporary reply queue to receive the previously exchanged messages.
3. Implement the method `onRequest` that listens on the topic `ChatHistoryTopic` and responds by delivering its message history to the sender's reply queue.
