

Spring Project

Project: Catalog Service

1. Implement a Spring Boot application with a catalog service that provides the following methods to manage books:

- `addBook()` - adds a book to the catalog
- `findBook()` - finds a book by ISBN number
- `searchBooks()` - searches for books by keyword
- `updateBook()` - updates a book in the catalog

2. Implement an integration test to verify the functionality of the service.

Catalog Service API ([../service-api/org/bookstore/catalog/service/CatalogService.html](http://localhost:8080/api/org/bookstore/catalog/service/CatalogService.html))
