

# Spring Core

## Exercise: Reminder Application

1. Clone the GitLab repository Reminder (<https://gitlab.ti.bfh.ch/cas-sad-hs25/spring-core/reminder>).
2. Implement a service `ReminderService` that allows scheduling a reminder message to be displayed a fixed number of times with a fixed delay.
3. Implement the trigger `RepetitionTrigger` that determines the next execution time based on a start time, a delay and a number of repetitions.
4. Implement a Spring Boot application that allows a user to enter a time and text and schedules a corresponding reminder.
